DETAILED ACTION

1. The indicated allowability of claims 1, 3, 5-7, & 11-26 are withdrawn in view of the reference(s) to Moser et al. (US Pat. 5,417,956). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102(b)

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3, 5-7, & 11-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Moser et al., "hereinafter Moser '956", (US Pat. 5,417,956).

Moser '956 discloses nanophase materials including barium, titanate, zirconia, magnesia, iron oxide, lanthana, alumina, and titania, having particle sizes in the nanometer range of from about 1 to 30 nm and are crystalline (see col. 5, ln 23-27). The materials are produced by the same cavitation process (see examples and claims). Table II at col. 6 discloses iron oxide (FeO) having particle size of 1-3 nm and crystallites of about 5%. It is considered the claimed particle sizes and the crystallite strain are met since they fall within the disclosed ranges.

There is no patentable distinction seen between the claimed material and that disclosed by Moser '956.
